

# Project Update

## Katanning to Kojonup pipeline replacement – June 2023

### Work overview

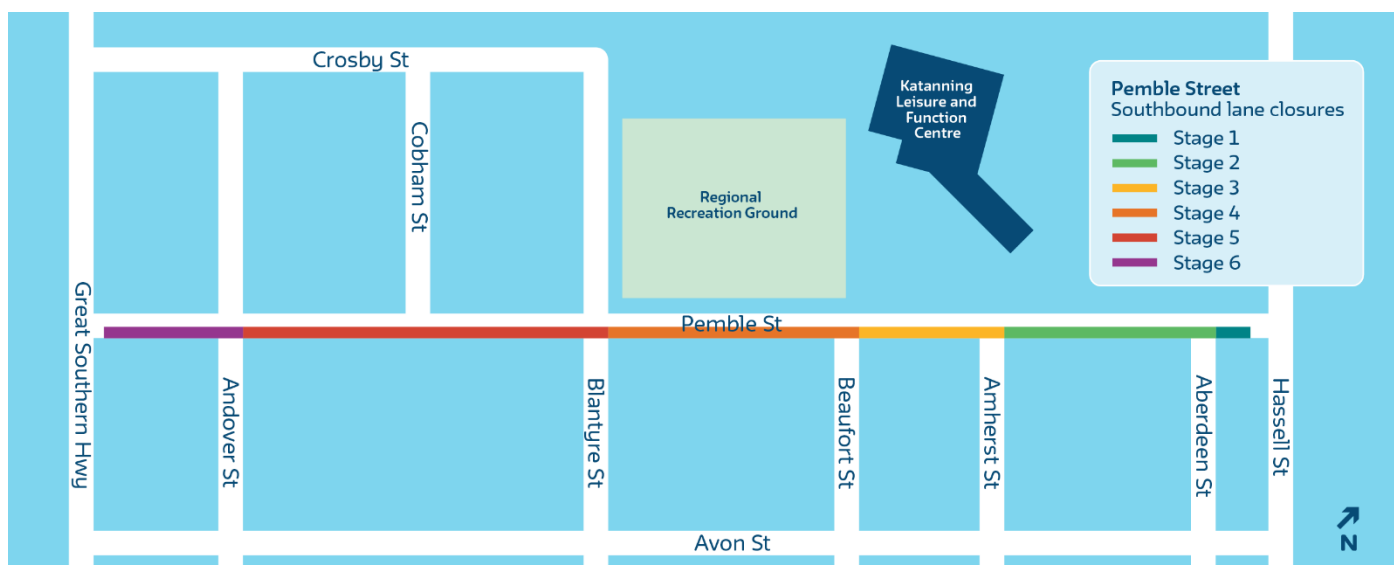

Water Corporation's authorised contractor Benang Energy, has begun work to replace 2.2 km of the Katanning to Kojonup pipeline in Katanning. The work is being undertaken to reduce the risk of future leaks and breaks and will increase the reliability of water supply to customers.

Work to date has focussed on installation of new pipeline in private land southwest of Great Southern Highway, connecting to Kojonup-Katanning Road. We are now ready to commence work in Pemble Street.

### What is happening?

Work along the southern side of Pemble Street will commence on **Monday 26 June**. Work will start near Hassell St (Stage 1 on the below map) and progress towards Great Southern Highway in a staged approach. This part of the work will take approximately 3 months.

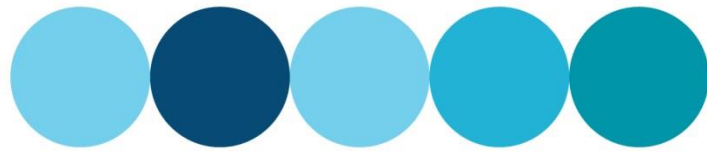

Working hours are Monday to Friday 7am to 5.30pm. We will advise if weekend work is required.

# Project Update

## Katanning to Kojonup pipeline Replacement – June 2023

### How will this impact me?

The work will require open excavation along the southern verge along Pemble street. During the work, properties on the southern side of Pemble Street may have **reduced access to the verge, laneways and driveways. You will be notified in advance when work is planned to impact your access. Please make the team aware if you have specific access needs that need to be catered for.**

**Single lane road closures** will be required along the southern side of Pemble street. **Traffic management** will be in place. All necessary and essential traffic will be maintained. Please observe all road signs so we can ensure our staff all return home safely at the end of the day.

You may experience an increase in noise, dust and activity during construction. We apologise for any inconvenience that you may experience from the work. Thank you for your cooperation and patience. If you have any questions or concerns please see contact details below.

### How long will the work take?

Work commenced on the 22 May 2023. The work will take between 6 to 8 months, depending on factors such as ground and weather conditions.

Please note that work timeframes may be subject to change due to poor weather, poor ground conditions and supply chain restraints outside of our control.
